

Puzzle design

DNA is two strands joined together by chemical bonds. A's can only fit with T's, & C's can only fit with G's. This is key to how DNA is copied and passed down. We've simplified the chemistry so anyone can play with DNA and learn about its simple but powerful properties. Connect all provided pieces to solve your DNA puzzle.

The Cipher of life

Your DNA puzzle has a message written in its sequence- try to decode it! Groups of 3 DNA letters hold instructions for making the complex machinery that powers life.

The blue DNA below represents one double-stranded molecule. See if you can find the message hidden in it! The answer can be found on the other side of this card. Hint: both strands CAN hold messages, but only one of the strands below will make sense.

DNA:

```
GCAAATGCCCGCCATGCTAATCGCGTTATC
CGTTTACGGGCGGTACGATTAGCGCAATAG
```

TTT = F	TCT = S	TAT = Y	TGT = C
